***SBM* completes the contract to supply, install, and upgrade the backup generator system for CMC Corporation’s Data Center at the Ho Chi Minh City High-Tech Park.**

On June 20, 2024, *SBM* completed the contract ahead of schedule by producing-assembling, supplying and installing an additional *SBMPOWER-FPT* 550 KVA along with a synchronization system connected to the existing system, increasing the total capacity to nearly 3000 KVA. In 2018, *SBM* had provided and installed two *SBMPOWER-PERKINS* 550 KVA at this location.

Given the crucial nature of the power source serving the Data Center, the CEO of *SBM* personally inspected, urged and supervised the process at the site. Selecting *SBMPOWER* generators for CMC’s important Central Data demonstrates that *SBM*’s products and services deliver reliable, high-quality power for essential projects.
